

505A-12 Miter Saw Protractor

No Calculations, Perfect Miter Joints - Every Time!

The ProSite® Miter Saw Protractor takes error-prone calculations out of the process of miter cuts. Simply set your saw to the angle that you read. Upside down or backwards, the reading is always correct.

This easy-to-use tool has two scales. The inner scale and outer arrow show the angle for a miter joint, while the inner arrow and outer scale provide the angle to fit a single workpiece to an angle.

The ProSite® Protractor saves the time and reduces waste. It's ideal for carpenters, plumbers and all building trades as well as invaluable for home use.

1. Measure the angle

2. Set the saw to the angle that the black arrow points to on the black number scale

3. Cut the pieces with the left and right angle, respectively

4. The result: A perfect miter
